## Longcast lances

- » The longcast lance can be connected to a low pressure pump, to a high pressure pump (max. 80 bar), to the public water system and to the extinguishing water network.
- » The lance works in the medium pressure range. By means of its very good solidity, good handling and compactness the lance is especially suitable for the intensive use.
- » The lateral hand grip makes a stepless adjustment of the water jet during the operation possible. A long casting point jet or a progressive, conical spray jet can be set.
- » In order to realize ideal cleaning results the nozzle size needs to be adapted to the pump performance (pressure and water quantity).
