

## ST-860D - the little sister of our steam gun ST-4000

The steam gun ST-4000 established on the market as the ideal solution for industrial cleaning tasks with steam is very much in demand among our customers. By means of the especial valve housing made out of aluminium having a 3/4" F connection the gun is especially designed and suitable for extremely high flow rates.

As reasonably priced and supremely powerful alternative for smaller to medium flow rates the steam gun ST-860D is now introduced into the market. As the little sister of the ST-4000 the ST-860D easily works at a medium temperature of up to 200 °C and at a working pressure of max. 20 bar. The fact that the hose connection is positioned in the front positively effects the professional handling with the gun as well as the heat radiation close to hand and body.

Apart from being enormously resistant to high temperatures the sealing copolymer is suitable for all liquids based on mineral oil as well as for inorganic acids, alkaline solutions, alcohol and anti-corrosion liquids based on amines and seawater or on their mixtures.

Steam guns ST-860D

Professional steam gun. Max. 20 bar / 200 °C

Steam guns ST-860D with lance
